

Overview

Thank you for researching HIV services at Wilshire Aesthetics. My staff and I are passionate about caring for the HIV community.

I have been a practicing physician for over thirty-three years. During the last twenty years I have pioneered and perfected techniques to restore HIV patients to their pre-HIV physical appearance. These techniques include

- removal of HIV "Buffalo" Hump
- restoring fullness to the face due to HIV facial wasting
- treatment of Kaposi's Sarcoma
- reducing male breast tissue, known as "gynecomastia"

If you would like to discuss ways in which I can help you regain your physical appearance, please take a moment to complete the short, confidential questionnaire contained on the next page.

You can

1. email us your completed response to questions@wilshireaesthetics.com
2. fax your completed response to 323-936-0887.

After we receive your response, we'll call you to discuss treatment options.

Sincerely;

Harvey Abrams, M.D.
