

## **Aurora DS for Hair Removal – Frequently Asked Questions**

### **How does the Aurora DS get rid of my hair?**

The Aurora uses gentle light and radiofrequency energy to damage the hair follicle. This disables the follicle from growing hair, which means that gradually over several treatments, there is a permanent reduction in the amount of hair in that area.

### **Is treatment with the Aurora DS safe?**

Treatment is very safe for the skin. There are many advances in the Aurora technology that make it one of the safest hair removal systems available for ALL skin types and hair colors. There are no long term health hazards from light or radiofrequency energy used in the Aurora. Both have been used for decades in medicine, surgery, and aesthetics without adversity.

### **What kind of result can I expect from the Aurora DS treatment?**

Each Aurora treatment will result in less hair coming back, as well as hair growing progressively lighter in color, finer, and slower growing with each treatment. It takes more than 1 treatment to affect all the hair follicles growing in an area. Most people achieve satisfactory clearance after 4-8 treatments, but individual results vary depending on medical and genetic factors. Lighter colored hair may require more treatments than darker colored hair.

### **How frequently do I need treatments?**

The treatments are usually performed every 1-3 months, but this depends on individual factors that your Aurora clinician will discuss with you during the consultation.

### **Does the treatment hurt?**

The sensation is often described as a “warm pinch” or “snapping” feeling. The sensation only lasts for a fraction of a second, and you may feel warmth or a tingling sensation for a short time afterward. Most people tolerate treatment without any topical anesthetic.

### **What happens after each treatment?**

Temporary pinkness in the skin lasts a very short time, and most people return to work or normal activities immediately after treatment. The treated area will “shed” some hairs over the next 1-4 weeks. You may experience hairlessness in the area while you wait for your next treatment.

### **Who should get the Aurora DS treatment for Hair Removal?**

Anyone who wants a permanent solution to shaving, waxing, plucking, or electrolysis. There are a few medical conditions that contraindicate people from treatment which will be discussed during your consultation. People need to avoid plucking or waxing for at least 4 weeks before your treatment.
